

Q)

Identified errors in the original data flow diagram (DFD):

1. Missing processes: Some of the activities mentioned in the scenario are missing as individual processes in the DFD.
2. Data flow ambiguity: The data flows in the DFD may lack clear labeling, making it difficult to understand the data being transferred.
3. Lack of hierarchy: The DFD should represent a clear hierarchical structure, with higher-level processes connecting to lower-level processes.
4. Incorrect labeling: Process names, data store names, and external entity names might be improperly labeled or missing.

Here's the corrected textual description of the data flow diagram:

Level 0 DFD:

1. Process: Receive Supplier Shipments

- Description: This process represents the overall event of receiving supplier shipments.
- Data Flows:
 - Receive Shipment Information: Data flow from external entity "Supplier" to the process, conveying shipment details.
 - Shipment Information: Data flow from the process to the external entity "Accounts Payable," passing along shipment details for payment processing.

Level 1 DFD:

1. Process: Receive Supplier Shipments

- Description: This process represents the detailed activities involved in receiving supplier shipments.
- Data Flows:
 - Receive Shipment Information: Data flow from external entity "Supplier" to the process, conveying shipment details.
 - Shipment Information: Data flow from the process to the external entity "Accounts Payable," passing along shipment details for payment processing.
- Subprocesses:
 1. Get New Order in Warehouse:
 - Description: This subprocess involves receiving and acknowledging the new order in the warehouse.
 2. Unpack Boxes:
 - Description: This subprocess involves unpacking the received boxes to access the items.
 3. Verify Received Items:
 - Description: This subprocess involves checking and verifying if all the ordered items were received correctly.

4. Place Items on Correct Shelves:

- Description: This subprocess involves organizing and placing the items on their designated shelves.

5. Reconcile Discrepancies with Supplier:

- Description: This subprocess involves dealing with the supplier to reconcile any discrepancies in the received items.

6. Adjust Inventory Quantities:

- Description: This subprocess involves updating the inventory quantities on hand based on the received items.

Note: Depending on the complexity of the process, additional refinements and subprocesses can be added.
